## Intro: Wooden beer mug

This guide is for making a big wooden beer mug.

I made it 15cm x 22cm.

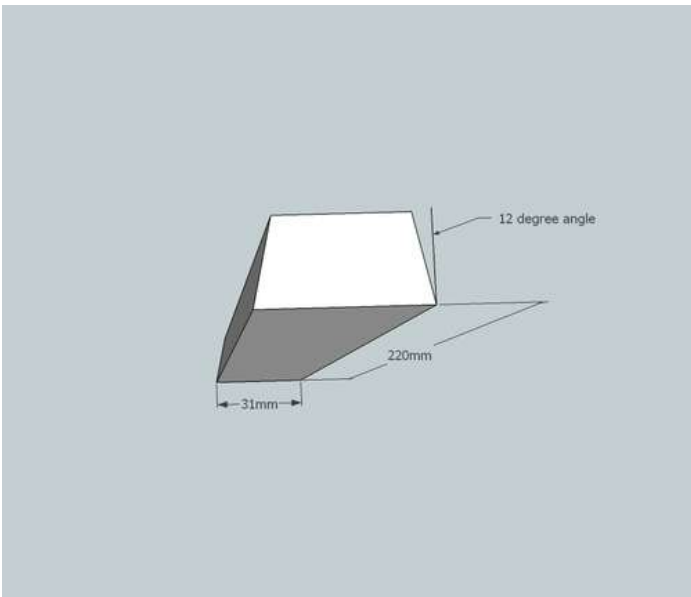

Maybe not so suitable for drinking beer but for decorative purpose or ,like me as a trash and beer caps bin.

## Step 1: Cutting the wood

For this mug i used some pallet wood i had laying around.

You will need 15 sticks cut at a length of 22 cm and at an angle of 12 degrees.

## Step 2: Tape it

Put the sticks around something round and tape them together ,but leave one opening.

### Step 3: Glueing

Now take the whole thing and put it on a flat surface and put some glue between the sticks .

### Step 4: Tourniqueting

Now fold it together again.  
I used some rope and a pair of screwdrivers to tighten the sticks together.  
Now you can let the glue dry.

### Step 5: The ear

Now you can make the ear.

Mine is approx. 20cm x 8cm.

I did all the sanding with an angle grinder.

When the glue of the mug has dried ,you can also sand this.

### Step 6: Decorings

To make it look better i've put some rings out of sheetmetal around them.

But you could also use some rope.

With the angle grinder i made some grooves and glued the rings in.

### Step 7: Putting it together

Now put the ear on it ,  
I made the mistake to put the bottom in before screwing the ear on from the inside.  
Next glue the bottom in and do some more sanding
